Write a program to find the largest of two numbers? This little algorithm is used to help us in arranging the data in some collating sequence, arranged information always helps us in processing the information into useful data.

## Input Format

The first line informs you the number of test cases. Each separate line has two integer values to find the relation between the two integer values.

## Constraints

$\text{INT\_MIN} \leq n1, n2 \leq \text{INT\_MAX}$

## Output Format

"%d > %d"

## Sample Input 0

```
3
19 90
-890 1
895623 1290341
```

## Sample Output 0

```
90 > 19
1 > -890
1290341 > 895623
```
